OVER - THE - HORIZON IDEAS TODAY

Program Management

What if you have to maintain and modernize a costly ERP system, but you don't have the expertise or resources to update it?

Enterprise Horizon Consulting Group (EHCG) is a small business that has been supporting large scale Enterprise Resource Planning (ERP) implementations in the Defense and Federal sectors since 2005. Its customers include Navy Supply Systems Command (NAVSUP), Space and Naval Warfare Command (SPAWAR), National Aeronautics and Space Administration (NASA), and the Army ERP Program.

EHCG is fast becoming the premier small business SAP ERP provider in the DoD/Federal workspace. Many of EHCG's employees worked for companies such as Price Waterhouse Coopers (PWC), IBM and

SAP where they learned all aspects of SAP's ASAP Methodology – from initial planning and preparation, to blueprint, realization, and final “go live” stages. Many of EHCG's business partners have been ERP industry leaders such as Accenture, SAIC, IBM and Deloitte.

For these reasons, it is not surprising that many Defense and Federal owners of large ERP programs have reached out to EHCG to help them manage their programs, navigate SAP software upgrades, and deliver enhancements.

EHCG also understands the significant challenges these organizations face extracting ERP data and integrating it with legacy system information to execute financial reporting and supply chain management processes. For several of its largest ERP customers, EHCG has developed custom ERP and legacy data integration solutions that are much less costly than traditional system interfaces. These solutions also have an added benefit of improving data quality with increased use.
